

VIRON

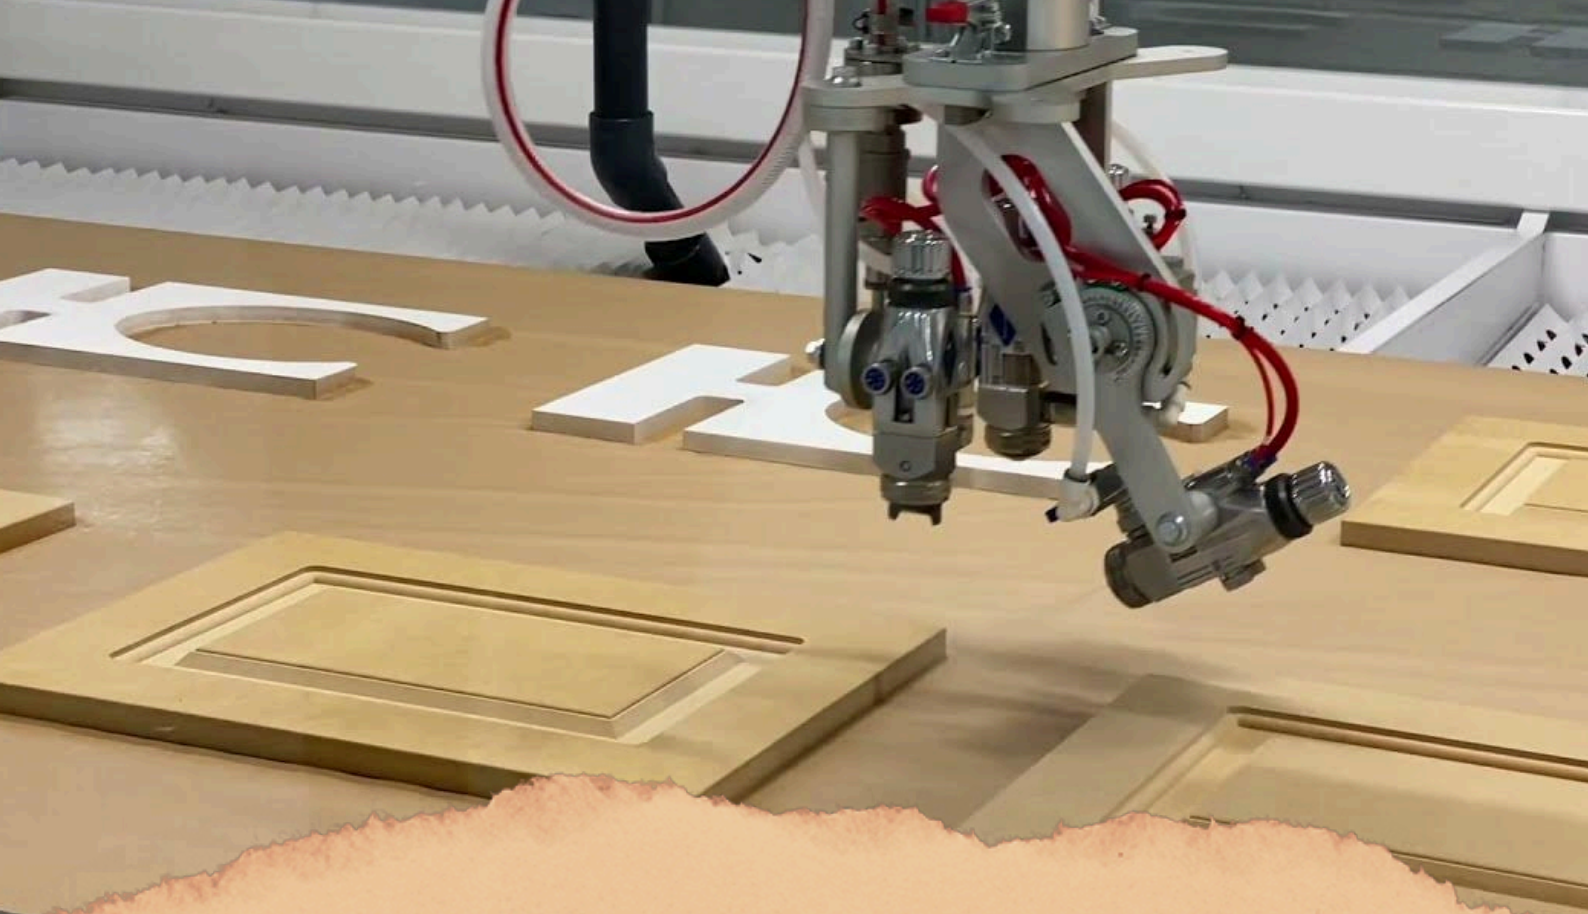

ULTRA CLEAR 1K

ULTRA CLEAR 1K

*Fast curing, Superior self sealing,
Scratch resistance, Available in different glosses*

Ultra Clear 1K is our offering for water-based spray-applied coatings (single-component), giving fixtures and furnishings transparent finishes that are smooth and feel like natural wood-grain to the touch.

There is no such thing as a fix-all for coatings: after all, different problems will always require different solutions. Ultra Clear 1K is probably the closest we could ever get to a coating system that satisfies the rigorous needs of the industry. It's our optimised solution for interior surfaces such as panelling and profiling.

Ultra Clear 1K provides you with an environmentally friendly, water-based coating that is leaps ahead of conventional solvent based systems, and yet preserves the wood-grain aesthetic that defined industry trends since the 20th century.

Ultra Clear 1K serves as both a sealer and top coat, effectively cutting costs for the manufacturer in half. Ultra Clear 1K may be used in autospray or electrostatic coating machines, providing unparalleled transfer efficiencies of up to 70%. Application of Ultra Clear 1K may also be paired with UV-roller technology, furthering transfer efficiency to $\leq 98\%$ and capitalising on ease of automation. This application method is exclusive to flat surfaces.

Like with all of our products, Viron guarantees uncompromising excellence in the coatings you produce with us: we make it our utmost priority to seek the most effective solutions to your coating needs. There is simply nothing we won't do to keep you, our esteemed customers, happy (and your coatings pristine).
