DemiDech

CLEAR

Oxydative Oil is conventional system for exterior wood coating. It work to protect the surface from sunlight radiation, extreme weather, and micro organism. Oxydative Oil haven't long protection, and need to re-oil process for several month to re-new it and the application can only be how much the wood can be absorb.

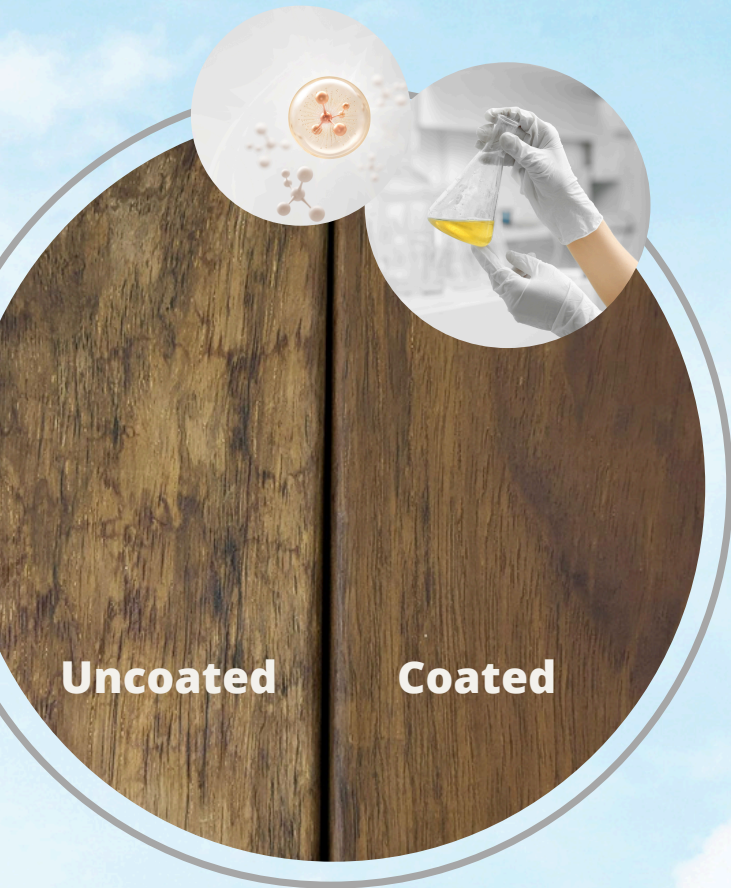

DemiDech Clear is specially formulated for exterior use, utilising special UV-absorbers to prevent yellowing due to UV exposure; and antifungal agents to mitigate the buildup of mould on outdoor surfaces.

DemiDech Clear is designed to penetrate deep into surfaces and dry quickly: a combination of eco-friendly, biomass-derived ingredients (bio-base) gives DemiDech Clear better carbon content and longer-lasting protection of outdoor surfaces, while remaining virtually odourless. As with all of our products, DemiDech Clear represents the future of environmentally sound coating solutions; it is the future we at Viron strive to achieve, one step at a time.

NICE PROTECTION

DemiDech Clear is available in invisible (5 unit), matte (10 unit), and satin (20-35 unit) gloss levels. The additional of Cross-Linker DD 1% give best performance, build up, and protection. To achieve best result, recommend to combine with PrePrime Impregnation. It suitable application for **wood decking, wall panel, WPC.**

Unlike conventional oxidative oils, DemiDech Clear has longer protection, does not require frequent reapplication: **DemiDech Clear lasts up to two years (Oxydative Oil - 6 months)**, while simultaneously providing excellent resistance to extreme weather conditions (no whitening and chipping)

DEMIDECH CLEAR ON WOOD

Wood is a popular choice for outdoor living spaces due to its natural appearance, durability, and versatility. It provides a timeless and classic look for outdoor spaces, making it a right choice for users.

DemiDech Aqua Exterior Oil Clear is also suitable for application on wood (~decking). The variations in wood colors give a natural impression on each layer.

Simple Process

**Coating Layer
Wood Decking**

Raw wood

1st Layer

2nd Layer

DemiDech available applied with brush, hand roller, and manual spray. The coating process is very simple only 2 application process.

- Clean surface, removing dust and other particles.
- Apply 2 layers of 80ml DemiDech with 1% Cross-linker DD and light sanding between layer

Note :

- **Spray application can add 5-10% water**
